Diff-Stat® with Syntrinorx® shown to be effective in the prevention of Antibiotic Associated Diarrhea in LTC residents.

ENGLEWOOD, NJ. March 3, 2011 -- Medical Nutrition USA, Inc. today announced the results of an interventional study showing that 95% of 120 LTC residents treated with antibiotics did not develop Antibiotic Associated Diarrhea (AAD) and 99% did not develop *C. difficile* while taking a synbiotic tablet, Diff-Stat® with Syntrinorx®, containing two probiotics and a prebiotic. The results were published in the Health journal dated February 2011 authored by Charles Spielholz Ph.D.

"Up to 33 percent of LTC residents treated with an antibiotic acquire *C. diff*, with a 44 percent rate of recurrence within one to two months. (1,2). This new study shows that Diff-Stat with Syntrinorx® is shown to be safe, effective and tolerable for older, nursing home residents," said Arnold Gans, Chief Scientific Officer of Medical Nutrition USA. The study can be found at: <http://www.scirp.org/journal/health/>.

About Medical Nutrition USA, Inc. Medical Nutrition USA develops and distributes products for the nutritionally at risk who are under medical supervision. Its products are used primarily in long-term care facilities, hospitals, dialysis clinics and bariatric clinics.
